Professional Summary

Security Operations Center (SOC) analyst with strong hands-on experience in SIEM tools (Wazuh, ELK Stack), AI-powered anomaly detection, threat hunting, incident response, and vulnerability management. Proficient in endpoint security, real-time monitoring, log analysis, EDR, and integrating machine learning models for advanced threat detection. Currently contributing to SOC and NOC operations for security and network monitoring at Tally Marks Consulting while developing cutting-edge AI-driven cybersecurity solutions in the IT Consulting and Technology Industry sectors. Additionally, I have experience in IT Infrastructure management and IT Operations to ensure IT Service efficiency and effectiveness. My strong communication skills facilitate effective collaboration with teams and stakeholder groups.

Education

- Namal University Mianwali** **Mianwali, Pakistan**
B.S. Computer Science *Sep 2021 - June 2025*
-

Skills

- Programming Languages:** Python, C++, SQL
 - Frameworks and Libraries:** TensorFlow, Scikit-Learn, Pandas, NumPy, Keras
 - SIEM & Security Tools:** Wazuh, ELK Stack (Elasticsearch, Logstash, Kibana), Zabbix, VirusTotal, Grafana
 - Tools and Technologies:** Git/GitHub, Linux, MySQL, Cisco Packet Tracer
 - Domains:** Cybersecurity, SOC Operations, Machine Learning for Security, Deep Learning, Anomaly Detection, Threat Intelligence, Incident Response
-

Experience

- Tally Marks Consulting** **Lahore, Pakistan**
Management Trainee Officer *Present*
 - Currently supporting SOC operations, including real-time security monitoring, incident detection, and response using SIEM tools and automated alerting systems.
 - Contributing to infrastructure security, identity management, vulnerability assessments, and implementation of security best practices across network and cloud environments.
 - Collaborate with cross-functional teams and stakeholder groups to enhance operational efficiency and troubleshoot security challenges while developing and adhering to security policies. Leadership roles in these efforts also involved mentoring junior team members on procedures and best practices.
 - Applying disciplined problem-solving and project methodologies to enhance operational efficiency and threat mitigation using advanced firewall solutions as part of the comprehensive security strategy.
 - Itsolera** **Islamabad, Pakistan**
SOC Intern
 - Gained hands-on experience with Wazuh for endpoint security, incident response and threat analysis on Windows and Linux systems.
 - Performed penetration testing, conducted vulnerability assessments, analyzed logs, and implemented security engineering practices to strengthen network defenses in alignment with IT Service protocols.
-

Projects

- **AI Powered Anomaly Detection System using Wazuh and ELK Stack** [Drive] Oct 2024 – June 2025
Developing an AI-driven anomaly detection system by integrating custom machine learning models with Wazuh and ELK Stack for real-time threat identification, automated alerting, and detailed reporting in a production-like SOC environment.
 - **SIEM Solution for Threat Detection and Response** [Drive] Jun 2024
Built a complete SIEM platform integrating Wazuh Server, Indexer, Dashboard, VirusTotal, and Grafana for centralized log collection, real-time threat detection, correlation rules, penetration testing, and incident response workflows.
 - **Enhancing Network Security: ML Approach to VPN and Non-VPN Traffic Classification** [Drive] Jul 2024
Developed and evaluated machine learning models to accurately classify VPN and non-VPN traffic, enhancing network design and detection of potential threats; research paper under review.
 - **Zabbix-based Infrastructure and Network Monitoring** 2026
Deployed Zabbix server on Red Hat Linux, configured SNMP monitoring, log collection, and custom alerts for servers and network devices to support proactive performance monitoring.
 - **VPN System for Secure Organizational Communication** [Github] May 2022
Designed and implemented a secure VPN tunnel using TCP/IP protocols to protect organizational communication and ensure data confidentiality.
-

Awards

- **4th Position at Innovative Lyallpur 3.0, University of Faisalabad** May 2025
Awarded 4th position among 250+ projects for the AI Powered Anomaly Detection System using Wazuh and ELK Stack, recognized for innovation in cybersecurity and SOC-relevant solutions, demonstrating strong reliability and responsibility in project execution and documentation.
